ABSTRACT

Urobilinogen is a metabolic breakdown product produced in our body as a result of bilirubin breakdown which in turn is produced by RBCs breakdown. The site of production is intestine. Its secretion in urine depicts infection. This is interrelated with trends of movie likeness. Its presence was confirmed in urine samples by performing tests. People were asked to answer the question regarding movies. All the results were then arranged in well manner.

KEYWORDS: *Urobilinogen, Intestines, Hematoma, Anemia*
