ABSTRACT

Entrepreneurship plays a pivotal role in both the macro and micro levels of the economy. On a macro level, it contributes to the overall growth and development of the nation, while on a micro level, it empowers countless individuals to become self-sufficient. However, despite the diverse educational landscape in our country, entrepreneurship education remains significantly underrepresented. To ensure the sustainability of our economy and the independence of individuals, it is imperative to integrate entrepreneurship into the current educational framework.
