ABSTRACT

This study analyses the patterns of publication of the Indian Journal of Occupational & Environmental Medicine from 1997 to 2012. The study finds that IJOEM principally publishes papers in form of original articles. The journal has constantly published elaborated articles ranging from one to twenty pages. The study further reveals that larger chunk of research publications in the journal are in multi authorship mode owing to multiple discipline involved scientific assignment. The degree of collaboration in the publications of the journal is found to be **0.740**. Most frequently occurred keywords indexed in the articles of the journal are: Physically Inactivity and Occupational Health. Moreover, the study finds that, the journal has accommodated the papers contributed from Indian different states and different countries like Iran, Nigeria, UK, Italy Turkey Canada etc.

KEYWORDS: Bibliometric Study, Physically Inactivity Occupational Health
