### **ABSTRACT**

Information and communication technologies (ICT) have become common place entities in all aspects of life. During the past twenty years the use of ICT has fundamentally changed the practices and procedures of nearly all forms of endeavour within business and governance. Education is a socially oriented activity and quality education has traditionally been associated with good teachers having high degrees of personal contact with learners. The use of ICT in education lends itself to more student-centered learning settings. But with the world moving rapidly into digital media and information, the role of ICT in education is becoming more and more important and it will continue to grow and develop in the 21<sup>st</sup> century. The paper provides the literary review regarding usage of ICTs in education, along with ICT use in the teaching learning process. ICT among the disadvantaged section, quality and accessibility of education: learning motivation, learning environment and ICT to enhance scholastic performance are note worthy to mention.

**KEYWORDS:** Information, Communication Technologies
