

ENGLISH IN DIGITAL AGE: TRENDS, TRANSFORMATION AND TRAJECTORIES

Prof. Dr. Ganesh Jadhav

Head, Department of English, D G College of Commerce, Satara, India

ABSTRACT

In the digital age, English has become the dominant language for global communication. It greatly influences online interactions, the spread of knowledge, and cultural exchanges. As the main language of the internet, English is prevalent in critical digital systems such as programming languages, web protocols, major social media platforms, and academic databases. This dominance offers unparalleled access to information and connections, fostering international collaboration in areas like business, science, and technology. English acts as a crucial link, enabling real-time interaction and community building across geographic and language barriers. The future of English will depend on the ongoing tension between its established, formal forms and the new, user-generated variations that keep emerging, significantly changing both global communication and the English language.
