ABSTRACT

Education has the power to eliminate poverty and other evils that exist in our society. Quality education cannot be achieved through the conventional system of education. Globalization has provided more opportunity in the field of education. The World Wide Web is being used to improve communication, sharing of resources and delivery of education in distance learning mode. E-learning may be taken as the latest form of distance learning mode. The flexibility of learning a topic of interest anytime, anywhere has not only attracted the students, but also many individuals, institutions. Many individuals and organizations are adopting e-learning because of its effectiveness. This paper gives an overview of e-learning in India and its role in the education system.
