# SOME RESULTS ON INTUITIONISTIC FUZZY METRIC SPACE 

Dr. Preeti Sengar<br>Research Scholar, SGSITS Indore, Madhya Pradesh, India

## ABSTRACT

In this paper, we establish some common fixed point theorems we simplify the results of Chouhan and Kumar [4] from FMS to IFMS in IFMS for series of self-mappings making use of an implicit relation and the typical property (E.A) in which.

KEYWORDS: FMS, IFMS, Semi-Compatible Sub-Sequentially Continuous Mappings

## 1. INTRODUCTION

Atanassov generalized the idea of fuzzy set by launching the conception of intutionistic fuzzy set and thereafter numerous authors (Manro et al. 2012; Alaca et al. 2006; Park 2004; Turkoglu et al. 2006) did contribution that is remarkable the field of intutionistic fuzzy sets. Al-Thagafi and Shahzad (2008) defined sporadically weakly compatible mappings in IFMS which is more basic than the idea of weakly mappings that are appropriate. They indicated that occasionally mappings which can be weakly appropriate weakly suitable mappings but converse is perhaps not fundamentally real.

## DEFINITION

2.1. A operation that is binary : $[0,1] \times[0,1] \rightarrow[0,1]$ is called a continuous $t$-norm if $\wedge$ satisfies the following axioms:
i. Is continuous, commutative, associative;
ii. $\quad 1=1 \mathrm{p}$ belongs to closed interval 0,1 ;
iii. $\mathrm{m} \leq \mathrm{n}$ o whenever $1 \leq \mathrm{n}, \mathrm{m} \leq \mathrm{o} \mathrm{p}, \mathrm{q}, \mathrm{r}, \mathrm{s}$ belongs to closed interval 0,1 .

Examples of t -norm are $1 \mathrm{~m}=\min \{1, \mathrm{~m}\}$ and $\mathrm{lm}=\mathrm{lm}$.
2.2. A operation that is binary: $[0,1] \times[0,1] \rightarrow[0,1]$ is called continuous t-conorm if $\rho$ satisfies the following axioms:
i. $\quad \rho$ is continuous, commutative, associative;
ii. $\quad d \rho 0=d d \in[0,1]$;
iii. $\quad d \rho e \leq f \rho g$ whenever $d \leq f, e \leq g a, b, c, d$ belongs to closed interval 0,1 .

Examples of t -norm are $\mathrm{d} \mathrm{e}=\min \{\mathrm{d}, \mathrm{e}\}, \mathrm{d} \rho \mathrm{e}=\mathrm{de}$.
2.3. A tuple $(\mathrm{Y}, \mathrm{U}, \mathrm{V}, \rho$ ) is called an IFMS if Y is an any set, and $\rho$ is a continuous t -norm and t -co-norm and $\mathrm{U}, \mathrm{V}$ are fuzzy sets on an interval $\mathrm{Y}^{2} \times[0, \infty)$ satisfying following axioms:
(i) $\mathrm{U}(\mathrm{m}, \mathrm{n}, \mathrm{t})+\mathrm{V}(\mathrm{m}, \mathrm{n}, \mathrm{t}) \leq 1 \mathrm{~m}, \mathrm{n} \in \mathrm{Y}$ and $\mathrm{t}>0$;
(ii) $\mathrm{U}(\mathrm{m}, \mathrm{n}, 0)=0 \mathrm{~m}, \mathrm{n} \in \mathrm{Y}$;
(iii) $\mathrm{U}(\mathrm{m}, \mathrm{n}, \mathrm{t})=1 \mathrm{~m}, \mathrm{n} \in \mathrm{Y}$ and $\mathrm{t}>0$ if and only if $\mathrm{m}=\mathrm{n}$;
(iv) $\mathrm{U}(\mathrm{m}, \mathrm{n}, \mathrm{t})=\mathrm{U}(\mathrm{n}, \mathrm{m}, \mathrm{t}) \mathrm{m}, \mathrm{n} \in \mathrm{Y}$ and $\mathrm{t}>0$;
(v) $\mathrm{U}(\mathrm{m}, \mathrm{n}, \mathrm{t}) * \mathrm{U}(\mathrm{n}, \mathrm{o}, \mathrm{s}) \leq \mathrm{U}(\mathrm{m}, \mathrm{o}, \mathrm{t}+\mathrm{s}) \mathrm{m}, \mathrm{n}, \mathrm{o} \in \mathrm{Y}$ and $\mathrm{s}, \mathrm{t}>0$;
(vi) $\mathrm{U}(\mathrm{m}, \mathrm{n}, \cdot):[0, \infty) \rightarrow[0,1]$ is left continuous, $\mathrm{m}, \mathrm{n} \in \mathrm{Y}$, ;
(vii) $\operatorname{limn} \rightarrow \infty \mathrm{U}(\mathrm{m}, \mathrm{n}, \mathrm{t})=1 \mathrm{~m}, \mathrm{n} \in \mathrm{Y}$ and $\mathrm{t}>0$;
(viii) $\mathrm{V}(\mathrm{m}, \mathrm{n}, 0)=1 \mathrm{~m}, \mathrm{n} \in \mathrm{Y}$;
(ix) $\mathrm{m}=\mathrm{n}$ iff $\mathrm{V}(\mathrm{m}, \mathrm{n}, \mathrm{t})=0 \mathrm{~m}, \mathrm{n} \in \mathrm{Y}$ and $\mathrm{t}>0$;
(x) $\mathrm{V}(\mathrm{m}, \mathrm{n}, \mathrm{t})=\mathrm{V}(\mathrm{n}, \mathrm{m}, \mathrm{t}) \mathrm{m}, \mathrm{n} \in \mathrm{Y}$ and $\mathrm{t}>0$;
(xi) $\mathrm{V}(\mathrm{m}, \mathrm{n}, \mathrm{t}) \rho \mathrm{V}(\mathrm{n}, \mathrm{o}, \mathrm{s}) \geq \mathrm{V}(\mathrm{m}, \mathrm{o}, \mathrm{t}+\mathrm{s}) \mathrm{m}, \mathrm{n}, \mathrm{o} \in \mathrm{Y}$ and $\mathrm{s}, \mathrm{t}>0$;
(xii) $\mathrm{V}(\mathrm{m}, \mathrm{n}, \cdot):[0, \infty) \rightarrow[0,1]$ is right continuous $\mathrm{m}, \mathrm{n} \in \mathrm{Y}$;
(xiii) $\operatorname{limn} \rightarrow \infty \mathrm{V}(\mathrm{m}, \mathrm{n}, \mathrm{t})=0 \mathrm{~m}, \mathrm{n} \in \mathrm{Y}$.
2.6. Let $(Y, U, V, *, \diamond)$ be an FMS. Then a sequence $\left\{x_{n}\right\}$ in $X$ is called
(i) Convergent to a point $\mathrm{m} \in \mathrm{Y}$ if

$$
\operatorname{limn} \rightarrow \infty \mathrm{U}\left(\mathrm{x}_{\mathrm{n}}, \mathrm{~m}, \mathrm{~h}\right)=1, \operatorname{limn} \rightarrow \infty \mathrm{~V}\left(\mathrm{x}_{\mathrm{n}}, \mathrm{~m}, \mathrm{~h}\right)=0 \mathrm{~h}>0,
$$

(ii) Cauchy sequence if

$$
\operatorname{limn} \rightarrow \infty \mathrm{U}\left(\mathrm{x}_{\mathrm{n}+\mathrm{q}}, \mathrm{x}_{\mathrm{n}}, \mathrm{~h}\right)=1, \operatorname{limn} \rightarrow \infty \mathrm{~V}\left(\mathrm{x}_{\mathrm{n}+\mathrm{q}}, \mathrm{x}_{\mathrm{n}}, \mathrm{~h}\right)=0 \forall \mathrm{t}>0 \text { and } \mathrm{q}>0 .
$$

2.7. An FMS $(\mathrm{Y}, \mathrm{U}, \mathrm{V}, *, \diamond) \mathrm{s}$ called complete if and only if every Cauchy sequence in Y is convergent.
2.8. Let $P, Q$ be self-mappings of an $\operatorname{FMS}\left(Y, U, V,{ }^{*}, \rho\right)$ Then a pair $(P, Q)$ called commuting if $U(P Q x, Q P x, t)=1$, $\mathrm{V}(\mathrm{PQx}, \mathrm{QPx}, \mathrm{t})=0$.
2.9 A pair of self-maps $(k, l)$ of an $\operatorname{FMS}(\mathrm{Y}, \mathrm{U}, \mathrm{V}, \wedge, \rho)$ is said to be compatible if $\lim _{n \rightarrow \infty} \mathrm{U}\left(\mathrm{klx}_{\mathrm{n}}, \mathrm{lkx}_{\mathrm{n}}, \mathrm{h}\right)=1$, $\lim _{n \rightarrow \infty} V\left(k l x_{n}, l k x_{n}, h\right)=0$ for every $h>0$, whenever $\left\{x_{n}\right\}$ is a sequence $x_{n}$ in $Y: \lim _{n \rightarrow \infty} k x_{n}=\lim _{n \rightarrow \infty} d x_{n}=y$ for some $y Y$.
2.10. Allow $P$ and $Q$ be self-mappings of an IFMS $\left(X, U, V,{ }^{*}, \rho\right)$.Then a pair $(P, Q)$ is called Sub-compatible if lim $(\mathrm{n} \rightarrow \infty) \mathrm{U}(\mathrm{PQxn}, \mathrm{QPxn}, \mathrm{h})=1, \lim (\mathrm{n} \rightarrow \infty) \mathrm{V}(\mathrm{PQxn}, \mathrm{QPxn}, \mathrm{h})=0$ for all $h>0$, whenever $\{\mathrm{xn}\}$ is a sequence in $\mathrm{Y}: \lim$ $(\mathrm{n} \rightarrow \infty) \mathrm{Pxn}=\lim (\mathrm{n} \rightarrow \infty) \mathrm{Qxn}=\mathrm{u}$ for some $\mathrm{u} \in \mathrm{Y}$.

## 3. Main Result

 h) $\forall \mathrm{a}, \mathrm{b} \in[0,1]$.If the pairs $(\mathrm{R}, \mathrm{EF}),(\mathrm{S}, \mathrm{CD})$ are semi-compatible, sub-sequentially constant mappings, then

- The set (R, EF),(S, CD) are semi-compatible , sub-sequentially constant mappings.
- Further, the mappings R, S, C, D, E and F take a single common fixed point in Y providing the complex maps equation that is fulfill $\mathrm{U}^{2}(\mathrm{Rx}, \mathrm{Sy}, \mathrm{h}) *[\mathrm{U}(\mathrm{EFx}, \mathrm{Rx}, \mathrm{h}) * \mathrm{U}(\mathrm{CDy}, \mathrm{Sy}, \mathrm{h})]$ $[p \mathrm{U}(\mathrm{EFx}, \mathrm{Rx}, \mathrm{h})+\mathrm{qU}(\mathrm{EFx}, \mathrm{CDy}, \mathrm{h})] \mathrm{U}(\mathrm{EFx}, \mathrm{Ly}, \mathrm{h})$ and V2(Rx,Sy,h) $\rho[\mathrm{V}(\mathrm{EFx}, \mathrm{Rx}, \mathrm{h}) \diamond \mathrm{V}(\mathrm{CDy}, \mathrm{Sy}, \mathrm{h})]$
$[p \mathrm{~V}(\mathrm{EFx}, \mathrm{Rx}, \mathrm{h})+\mathrm{qV}(\mathrm{EFx}, \mathrm{CDy}, \mathrm{h})] \mathrm{V}(\mathrm{EFx}, \mathrm{Ly}, \mathrm{h})$
i x, y Y,h>0, where $0<p, q<1, p+q=1$.

## Proof:

We realize that pairs ( $\mathrm{R}, \mathrm{EF}$ ) and ( $\mathrm{S}, \mathrm{CD}$ ) are Semi-compatible and Sub-sequentially continuous mappings, there $\exists$ a sequence $\{x n\}$ in $Y$
$\lim _{n \rightarrow \infty} R x_{n}=\lim _{n \rightarrow \infty} E F x_{n}=p$ for some $h Y$
and $\lim _{n \rightarrow \infty} U\left(R(E F) x_{n},(E F) R x_{n}, t\right)=1, h<0$
and $\lim _{\mathrm{n} \rightarrow \infty} \mathrm{U}($ Rp, EFp, t$)=1$
then we have $\mathrm{Rp}=\mathrm{EFp}$,
Similarly $\lim _{n \rightarrow \infty} \mathrm{Sy}_{\mathrm{n}}=\lim _{\mathrm{n} \rightarrow \infty} \mathrm{CDy}_{\mathrm{n}}=\mathrm{g} \mathrm{Y}$
$\lim _{n \rightarrow \infty} U\left(S(C D) y_{n},(C D) S y_{n}, t\right)=1, i h<0$
and $\lim _{n \rightarrow \infty} \mathrm{U}(\mathrm{Sg}, \mathrm{CDg}, \mathrm{t})=1$
Henceforth $t$ and $g$ is a coincidence point of ( $R, E F$ ), $(S, C D)$.
then we become $\mathrm{Rp}=\mathrm{EFp}$ and $\mathrm{Sg}=\mathrm{CDg}$.
Step 1:- first we prove $\mathrm{p}=\mathrm{g}$. Put $\mathrm{x}=\mathrm{x}_{\mathrm{n}}, \mathrm{y}=\mathrm{y}_{\mathrm{n}}$ in equation (1.1)
$\mathrm{U}^{2}\left(\mathrm{Rx}_{\mathrm{n}}, \mathrm{Sy}_{\mathrm{n}}, \mathrm{h}\right)\left[\mathrm{U}\left(E F x_{n}, R x_{n}, \mathrm{~h}\right) \cdot \mathrm{U}\left(\mathrm{CDy}_{\mathrm{n}}, \mathrm{Sy}_{\mathrm{n}}, \mathrm{h}\right)\right]$
$\geq y_{[p U}($ EFxn,Rxn,h $\left.)+q U(E F x n, C D y n, h)\right] U(E F x n, S y n, h)$
and V2(Rxn,Syn,h) $\rho[$ (EFxn,Lxn,h) $\rho$ V(CDyn,Syn,h) $]$
$[p V($ EFxn, Rxn, h$)+q \mathrm{~V}($ EFxn, CDyn,h $)] \mathrm{V}($ EFxn,Syn,h $)$
Now, $\mathrm{U} 2(\mathrm{p}, \mathrm{g}, \mathrm{h}) \quad[\mathrm{U}(\mathrm{p}, \mathrm{p}, \mathrm{h}) . \mathrm{U}(\mathrm{g}, \mathrm{g}, \mathrm{h})]$ i i $\mathrm{pU}[(\mathrm{p}, \mathrm{p}, \mathrm{h})+\mathrm{qU}(\mathrm{p}, \mathrm{g}, \mathrm{h})] \mathrm{U}(\mathrm{p}, \mathrm{g}, \mathrm{h})$
and $\mathrm{V} 2(\mathrm{p}, \mathrm{g}, \mathrm{h}) \rho[\mathrm{V}(\mathrm{p}, \mathrm{p}, \mathrm{h}) \rho \mathrm{V}(\mathrm{g}, \mathrm{g}, \mathrm{h})]$ i $\mathrm{pV}[(\mathrm{p}, \mathrm{p}, \mathrm{h})+\mathrm{qV}(\mathrm{p}, \mathrm{g}, \mathrm{h})] \mathrm{V}(\mathrm{p}, \mathrm{g}, \mathrm{h})$
$\mathrm{U} 2(\mathrm{p}, \mathrm{g}, \mathrm{h}) \geqslant \underset{\ln }{\mathrm{p}}+\mathrm{qU}(\mathrm{p}, \mathrm{g}, \mathrm{h})] \mathrm{U}(\mathrm{p}, \mathrm{g}, \mathrm{h})$
and $\mathrm{V} 2(\mathrm{p}, \mathrm{g}, \mathrm{h}) \leftrightarrows \mathrm{p}+\mathrm{qV}(\mathrm{p}, \mathrm{g}, \mathrm{h})] \mathrm{V}(\mathrm{p}, \mathrm{g}, \mathrm{h})$
$\mathrm{U}(\mathrm{p}, \mathrm{g}, \mathrm{h}) \mathrm{p} 1-\mathrm{q}$ and $\mathrm{V}(\mathrm{p}, \mathrm{g}, \mathrm{h}) \mathrm{p} 1-\mathrm{q}$
$\mathrm{U}(\mathrm{p}, \mathrm{g}, \mathrm{h})=1$ and $\mathrm{V}(\mathrm{p}, \mathrm{g}, \mathrm{h})=0$.
Thus we have $\mathrm{p}=\mathrm{g}$
Step 2:-again we prove that $R p=p$, Put $x=p, y=y_{n}$ in equation (1.1)
$\mathrm{U}^{2}\left(\mathrm{Rz}, \mathrm{Sy}_{\mathrm{n}}, \mathrm{h}\right)\left[\mathrm{U}(\mathrm{EFz}, \mathrm{Rz}, \mathrm{h}) . \mathrm{U}\left(\mathrm{CDy}_{\mathrm{n}}, \mathrm{Sy}_{\mathrm{n}}, \mathrm{h}\right)\right]$ i i $\left[\mathrm{pU}(\mathrm{EFz}, \mathrm{Rz}, \mathrm{h})+\mathrm{qU}\left(\mathrm{EFz}, \mathrm{CDy} y_{\mathrm{n}}, \mathrm{h}\right)\right] \mathrm{U}\left(\mathrm{EFz}, S y_{\mathrm{n}}, \mathrm{h}\right)$
and
$V^{2}\left(\mathrm{Rz}_{2}, \mathrm{Sy}_{\mathrm{n}}, \mathrm{h}\right) \rho\left[\mathrm{V}(\mathrm{EFz}, \mathrm{Rz}, \mathrm{h}) \rho \mathrm{V}\left(\mathrm{CDy}_{\mathrm{n}}, \mathrm{Sy}_{\mathrm{n}}, \mathrm{h}\right)\right]$ i $\left.\left[\mathrm{pN}(\mathrm{EFz}, \mathrm{Rz}, \mathrm{h})+\mathrm{qV}\left(\mathrm{EFz}, \mathrm{CDy}_{\mathrm{n}}, \mathrm{h}\right)\right] \mathrm{VEFz}, \mathrm{Sy}_{\mathrm{n}}, \mathrm{h}\right)$
$\mathrm{U}^{2}(\mathrm{Rp}, \mathrm{g}, \mathrm{h})_{\wedge}[\mathrm{U}(\mathrm{EFp}, \mathrm{Rp}, \mathrm{h}) . \mathrm{U}(\mathrm{g}, \mathrm{g}, \mathrm{h})][\mathrm{pU}(\mathrm{EFp}, \mathrm{Rp}, \mathrm{h})+\mathrm{qU}(\mathrm{EFp}, \mathrm{g}, \mathrm{h})] \mathrm{U}(\mathrm{EFp}, \mathrm{g}, \mathrm{h})$
and
V2(Rp, g, h) $\rho[\mathrm{V}(\mathrm{EFp}, \mathrm{Rp}, \mathrm{h}) \rho \mathrm{V}(\mathrm{g}, \mathrm{g}, \mathrm{h})][\mathrm{pV}(\mathrm{EFp}, \mathrm{Rp}, \mathrm{h})+\mathrm{qV}(\mathrm{EFp}, \mathrm{g}, \mathrm{h})] \mathrm{V}(\mathrm{EFp}, \mathrm{g}, \mathrm{h})$
$\mathrm{U} 2(\mathrm{Rp}, \mathrm{g}, \mathrm{h}) \quad[\mathrm{U}(\mathrm{Rp}, \mathrm{Rp}, \mathrm{h}) \cdot \mathrm{U}(\mathrm{g}, \mathrm{g}, \mathrm{h})][\mathrm{pU}(\mathrm{Rp}, \mathrm{Rp}, \mathrm{h})+\mathrm{qU}(\mathrm{Rp}, \mathrm{g}, \mathrm{h})] \mathrm{U}(\mathrm{Rp}, \mathrm{g}, \mathrm{h})$
and V2(Rp,g,h) $\rho[\mathrm{V}(\mathrm{Rp}, \mathrm{Rp}, \mathrm{h}) \rho \mathrm{V}(\mathrm{g}, \mathrm{g}, \mathrm{h})][\mathrm{pV}(\mathrm{Rp}, \mathrm{Rp}, \mathrm{h})+\mathrm{qV}(\mathrm{Rp}, \mathrm{g}, \mathrm{h})] \mathrm{V}(\mathrm{Rp}, \mathrm{g}, \mathrm{h}$
$\mathrm{U} 2(\mathrm{Rp}, \mathrm{g}, \mathrm{h})[\mathrm{p}+\mathrm{qU}(\mathrm{Rp}, \mathrm{g}, \mathrm{h})] \mathrm{U}(\mathrm{Rp}, \mathrm{g}, \mathrm{h})$
and V2(Rp,g,h) $[\mathrm{p}+\mathrm{qV}(\mathrm{Rp}, \mathrm{g}, \mathrm{h})] \mathrm{V}(\mathrm{Rp}, \mathrm{g}, \mathrm{h})$
$\mathrm{U}(\mathrm{Rp}, \mathrm{g}, \mathrm{h}) \mathrm{p} 1-\mathrm{q}$ and $\mathrm{V}(\mathrm{Rp}, \mathrm{g}, \mathrm{h}) \mathrm{p} 1-\mathrm{q}$
$\mathrm{U}(\mathrm{Rp}, \mathrm{g}, \mathrm{h})=1$ and $\mathrm{V}(\mathrm{Rp}, \mathrm{g}, \mathrm{h})=0$
Hence $\mathrm{Rp}=\mathrm{g}=\mathrm{p}$.
Step 3:- In this step we prove $\mathrm{Cp}=\mathrm{p}$
Then we use $\mathrm{x}=\mathrm{xn}, \mathrm{y}=\mathrm{p} \mathrm{n}$ (1.1)
U2(Rxn,Sp,h)[U(EFxn,Rxn,h)U(CDp,Sp,h)]
[pU(EFxn,Rxn,h)+qU(EFxn,CDp, h)] U(EFxn,Sp, h)
and V2(Rxn,Sp,h) $\rho[\mathrm{V}($ EFxn,Rxn,h) $\rho \mathrm{V}(\mathrm{CDp}, \mathrm{Sp}, \mathrm{h})]$
$[p \mathrm{~V}(\mathrm{EFxn}$, Rxn,h $)+q \mathrm{~V}(\mathrm{EFxn}, \mathrm{CDp}, \mathrm{h})] \mathrm{V}(\mathrm{EFxn}, \mathrm{Sph})$
U2(p,Sp,h) [U(Sp,Sp,h).U(p,p,h)]
$[p U(S p, S p, h)+q U(p, S p, h)] U(p, S p, h)$
and $\mathrm{V} 2(\mathrm{p}, \mathrm{Sp}, \mathrm{h}) \rho[\mathrm{V}(\mathrm{Sp}, \mathrm{Sp}, \mathrm{h}) \rho \mathrm{V}(\mathrm{p}, \mathrm{p}, \mathrm{h})]$
$[p V(S p, S p, h)+q V(p, S p, h)] V(p, S p, h)$
$\mathrm{U} 2(\mathrm{p}, \mathrm{Sp}, \mathrm{h})[\mathrm{p}+\mathrm{qU}(\mathrm{p}, \mathrm{Sp}, \mathrm{h})] \mathrm{U}(\mathrm{p}, \mathrm{Sp}, \mathrm{h})$
and $\mathrm{V} 2(\mathrm{p}, \mathrm{Sp}, \mathrm{h})[\mathrm{p}+\mathrm{qV}(\mathrm{p}, \mathrm{Sp}, \mathrm{h})] \mathrm{V}(\mathrm{p}, \mathrm{Sp}, \mathrm{h})$
$\mathrm{U}(\mathrm{p}, \mathrm{Sp}, \mathrm{h}) \mathrm{p} 1-\mathrm{q}$ and $\mathrm{V}(\mathrm{p}, \mathrm{Sp}, \mathrm{h}) \mathrm{p} 1-\mathrm{q}$

$$
\begin{aligned}
& \mathrm{U}(\mathrm{p}, \mathrm{Sp}, \mathrm{~h})=1, \mathrm{~V}(\mathrm{p}, \mathrm{Sp}, \mathrm{~h})=0 \\
& \text { we get } \mathrm{p}=\mathrm{Sp}
\end{aligned}
$$

Step 4:-Again we claim that $\mathrm{Sp}=\mathrm{p}$,
Put $x=D p, y=p$ in (1.1)
$\mathrm{U}^{2}(\mathrm{RDp}, \mathrm{Sp}, \mathrm{h})[\mathrm{U}(\mathrm{EF}(\mathrm{Dp}), \mathrm{Rp}, \mathrm{h}) . \mathrm{U}(\mathrm{CDp}, \mathrm{Sp}, \mathrm{h})]$
$[p \mathrm{U}(\mathrm{EF}(\mathrm{Dp}), \mathrm{Rp}, \mathrm{h})+\mathrm{qU}(\mathrm{EF}(\mathrm{Dp}), \mathrm{CDp}, \mathrm{h})] \mathrm{U}(\mathrm{EF}(\mathrm{Dp}), \mathrm{Sp}, \mathrm{h})$
and $V^{2}(R D z, S p, h) \rho[V(E F(D p), R p, h) \rho V(C D p, S p, h)]$
$[p \mathrm{~V}(\mathrm{EF}(\mathrm{Dp}), \mathrm{Rp}, \mathrm{h})+\mathrm{q} \mathrm{V}(\mathrm{EF}(\mathrm{Dp}), \mathrm{CDp}, \mathrm{h})] \mathrm{V}(\mathrm{EF}(\mathrm{Dp}), \mathrm{Sp}, \mathrm{h})$
$\mathrm{U}^{2}(\mathrm{RDp}, \mathrm{p}, \mathrm{h})[\mathrm{U}(\mathrm{EF}(\mathrm{Dp}), \mathrm{Rp}, \mathrm{h}) . \mathrm{U}(\mathrm{CD}, \mathrm{Sp}, \mathrm{h})]$
$[p \mathrm{U}(\mathrm{L}(\mathrm{Dp}), \mathrm{Lp}, \mathrm{h})+\mathrm{qU}(\mathrm{L}(\mathrm{Dp}), \mathrm{Sp}, \mathrm{h})] \mathrm{U}(\mathrm{L}(\mathrm{Dp}), \mathrm{Cp}, \mathrm{h})$
and $V^{2}(R D p, p, h) \rho[V(E F(D p), R p, h) \rho V(C D p, S p, h)]$
$[p \mathrm{~V}(\mathrm{~L}(\mathrm{Dp}), \mathrm{Lp}, \mathrm{h})+\mathrm{qV}(\mathrm{L}(\mathrm{Dp}), \mathrm{Sp}, \mathrm{h})] \mathrm{V}(\mathrm{L}(\mathrm{Dp}), \mathrm{Cp}, \mathrm{h})$
$U^{2}(D p, p, h)_{\wedge}[U(D p, D p, h) . U(p, p, h)]$
$[p \mathrm{U}(\mathrm{Dp}, \mathrm{Dz}, \mathrm{h})+\mathrm{qU}(\mathrm{Dp}, \mathrm{p}, \mathrm{h})] \mathrm{U}(\mathrm{Dp}, \mathrm{p}, \mathrm{h})$
$\mathrm{U}^{2}(\mathrm{Dp}, \mathrm{p}, \mathrm{h})[\mathrm{p}+\mathrm{qU}(\mathrm{Dp}, \mathrm{p}, \mathrm{h})] \mathrm{U}(\mathrm{Dp}, \mathrm{p}, \mathrm{h})$
and $V^{2}(D p, p, h) \rho[p+q V(D p, p, h)] V(D p, p, h)$
$\mathrm{U}(\mathrm{Dp}, \mathrm{p}, \mathrm{h}) \mathrm{p} 1-\mathrm{q}$ and $\mathrm{V}(\mathrm{Dp}, \mathrm{p}, \mathrm{h}) \mathrm{p} 1-\mathrm{q}$
$\mathrm{U}(\mathrm{Dp}, \mathrm{p}, \mathrm{h})=1$ and $\mathrm{V}(\mathrm{Dp}, \mathrm{p}, \mathrm{h})=0$
We get $\mathrm{Dp}=\mathrm{p}$
Step 5:- Once again we show that $\mathrm{Cp}=\mathrm{p}$,
Put $\mathrm{x}=\mathrm{Cp}, \mathrm{y}=\mathrm{p}$ in (1.1)
$\mathrm{U} 2(\mathrm{ACp}, \mathrm{Bp}, \mathrm{h})[\mathrm{U}(\mathrm{EFCp}, \mathrm{Ap}, \mathrm{h}) \cdot \mathrm{U}(\mathrm{CD}, \mathrm{Bp}, \mathrm{h})]$
$[p \mathrm{U}(\mathrm{EFCp}, \mathrm{ACp}, \mathrm{h})+\mathrm{qU}(\mathrm{EFCp}, \mathrm{CDp}, \mathrm{h})] \mathrm{U}(\mathrm{EFCp}, \mathrm{Bp}, \mathrm{h})$
and V2(ACp,Bp,h) $\rho[\mathrm{V}(\mathrm{EFCp}, \mathrm{Ap}, \mathrm{h}) \rho \mathrm{V}(\mathrm{CDp}, \mathrm{Bp}, \mathrm{h})]$
$[p \mathrm{~V}(\mathrm{EFCp}, \mathrm{ACp}, \mathrm{h})+\mathrm{qV}(\mathrm{EFCp}, \mathrm{CD}, \mathrm{h})] \mathrm{V}(\mathrm{EFCp}, \mathrm{Bp}, \mathrm{h})$
$\mathrm{U} 2(\mathrm{Cp}, \mathrm{p}, \mathrm{h}) \quad[\mathrm{U}(\mathrm{Ap}, \mathrm{Ap}, \mathrm{h}) \cdot \mathrm{U}(\mathrm{p}, \mathrm{p}, \mathrm{h})][\mathrm{pU}(\mathrm{Ap}, \mathrm{Ap}, \mathrm{h})+\mathrm{qU}(\mathrm{Cp}, \mathrm{p}, \mathrm{h})] \mathrm{U}(\mathrm{Cp}, \mathrm{p}, \mathrm{h})$
and
$\mathrm{V} 2(\mathrm{Cp}, \mathrm{p}, \mathrm{h}) \rho[\mathrm{V}(\mathrm{Ap}, \mathrm{Ap}, \mathrm{h}) \rho \mathrm{V}(\mathrm{p}, \mathrm{p}, \mathrm{h})][\mathrm{pV}(\mathrm{Ap}, \mathrm{Ap}, \mathrm{h})+\mathrm{qV}(\mathrm{Cp}, \mathrm{p}, \mathrm{hh})] \mathrm{V}(\mathrm{Cp}, \mathrm{p}, \mathrm{h})$
$\mathrm{U} 2(\mathrm{Cp}, \mathrm{p}, \mathrm{h})[\mathrm{p}+\mathrm{qU}(\mathrm{Cp}, \mathrm{p}, \mathrm{ht})] \mathrm{U}(\mathrm{Cp}, \mathrm{p}, \mathrm{h})$
and $\mathrm{V} 2(\mathrm{Cp}, \mathrm{p}, \mathrm{h})[\mathrm{p}+\mathrm{qV}(\mathrm{Cp}, \mathrm{p}, \mathrm{h})] \mathrm{V}(\mathrm{Cp}, \mathrm{p}, \mathrm{h})$
$\mathrm{U}(\mathrm{Cp}, \mathrm{p}, \mathrm{h}) \mathrm{p} 1-\mathrm{q}$ and $\mathrm{V}(\mathrm{Cp}, \mathrm{p}, \mathrm{h}) \mathrm{p} 1-\mathrm{q}$
$\mathrm{U}(\mathrm{Cp}, \mathrm{p}, \mathrm{h})=1$ and $\mathrm{V}(\mathrm{Cp}, \mathrm{p}, \mathrm{h})=0$

We get $C p=p$
Step 6:- Once more we prove that $\mathrm{Fp}=\mathrm{p}$,

Put $x=F p, y=p$ in (1.1)
$\mathrm{U} 2(\mathrm{AFp}, \mathrm{p}, \mathrm{h}) \quad[\mathrm{U}(\mathrm{EF}(\mathrm{Fp}), \mathrm{Ap}, \mathrm{h}) . \mathrm{U}(\mathrm{CD}(\mathrm{Fp}), \mathrm{Bp}, \mathrm{h})]$
$[p \mathrm{U}(\mathrm{EF}(\mathrm{Fp}), \mathrm{A}(\mathrm{Fp}), \mathrm{h})+\mathrm{qU}(\mathrm{EF}(\mathrm{Fp}), \mathrm{CDp}, \mathrm{h})] \mathrm{U}(\mathrm{EF}(\mathrm{Fp}), \mathrm{Bp}, \mathrm{h})$
and $\mathrm{V} 2(\mathrm{AFp}, \mathrm{p}, \mathrm{h}) \rho[\mathrm{V}(\mathrm{EF}(\mathrm{Fp}), \mathrm{Ap}, \mathrm{h}) \rho \mathrm{V}(\mathrm{CD}(\mathrm{Fp}), \mathrm{Bp}, \mathrm{h})]$
$[p \mathrm{~V}(\mathrm{EF}(\mathrm{Fp}), \mathrm{A}(\mathrm{Fp}), \mathrm{h})+\mathrm{qV}(\mathrm{EF}(\mathrm{Fp}), \mathrm{CDp}, \mathrm{h})] \mathrm{V}(\mathrm{EF}(\mathrm{Fp}), \mathrm{Bp}, \mathrm{h})$
$\mathrm{U} 2(\mathrm{Fp}, \mathrm{p}, \mathrm{h}) \quad[\mathrm{U}(\mathrm{Fp}, \mathrm{Fp}, \mathrm{h}) \cdot \mathrm{U}(\mathrm{Bp}, \mathrm{Bp}, \mathrm{h})]$
$[p \mathrm{U}(\mathrm{Fp}, \mathrm{Fp}, \mathrm{h})+\mathrm{qU}(\mathrm{Fp}, \mathrm{p}, \mathrm{h})] \mathrm{U}(\mathrm{Fp}, \mathrm{p}, \mathrm{h})$
and V2(Fp,p,h) $\rho[\mathrm{V}(\mathrm{Fp}, \mathrm{Fp}, \mathrm{h}) \rho \mathrm{V}(\mathrm{Bp}, \mathrm{Bp}, \mathrm{h})]$
$[p V(\mathrm{Fp}, \mathrm{Fp}, \mathrm{h})+\mathrm{qV}(\mathrm{Fp}, \mathrm{p}, \mathrm{h})] \mathrm{V}(\mathrm{Fp}, \mathrm{p}, \mathrm{h})$
U2(Fp,p,h) [p+qU(Fp,p,h)] U(Fp,p,h)
and V2(Fp,p,h) $\rho[\mathrm{p}+\mathrm{qV}(\mathrm{Fp}, \mathrm{p}, \mathrm{h})] \mathrm{V}(\mathrm{Fp}, \mathrm{p}, \mathrm{h})$
$\mathrm{U}(\mathrm{Fp}, \mathrm{p}, \mathrm{h}) \mathrm{p} 1-\mathrm{q}$ and $\mathrm{V}(\mathrm{Fp}, \mathrm{p}, \mathrm{h}) \mathrm{p} 1-\mathrm{q}$
$\mathrm{U}(\mathrm{Fp}, \mathrm{p}, \mathrm{h})=1$ and $\mathrm{V}(\mathrm{Fp}, \mathrm{p}, \mathrm{h})=0$

We get $\mathrm{Fp}=\mathrm{p}$
Step 7:- Once more we prove that $E p=p$, put $y=p$ and $x=E p$ in (1.1) $U^{2}(A E p, B p, h)_{\wedge}[U(E E p, A p, h) . U(C D p, B p, h)]$
[pU(EFEp,Ap,h)+qU(EFEp,CDp, h)] U(EFEp, Bp, h)
and V2(AEp,Bp,h) $\rho[\mathrm{V}(\mathrm{EEp}, \mathrm{Ap}, \mathrm{h}) . \mathrm{V}(\mathrm{CDp}, \mathrm{Bp}, \mathrm{h})]$
[pV(EFEp,Ap,h)+qV(EFEp,CDp, h)] V(EFEp, Bp, h)
U2(Ep,p,h) [U(Ep,Ep,h).U(p,p,h) [pU(Ep,Ep,h)+qU(Ep,p, h)] U(Ep, p, h)
and V2(Ep,p,h) $\rho[\mathrm{V}(\mathrm{Ep}, \mathrm{Ep}, \mathrm{h}) \rho \mathrm{V}(\mathrm{p}, \mathrm{p}, \mathrm{h})][\mathrm{pV}(\mathrm{Ep}, \mathrm{Ep}, \mathrm{h})+\mathrm{qV}(\mathrm{Ep}, \mathrm{p}, \mathrm{h})] \mathrm{V}(\mathrm{Ep}, \mathrm{p}, \mathrm{h})$
U2(Ep,p,h) [p+qU(Ep,p,h)] U(Ep,p,h)
and V2(Ep,p,h) [p+qV(Ep,p,h)] V(Ep,p,h)
U(Ep,p,h) p1-q and V(Ep,p,h) p1-q
$\mathrm{U}(\mathrm{Ep}, \mathrm{p}, \mathrm{h})=1$ and $\mathrm{V}(\mathrm{Ep}, \mathrm{p}, \mathrm{h})=0$

```
We get Ep=p
i.e. \(\mathrm{Rp}=\mathrm{Sp}=\mathrm{Cp}=\mathrm{Dp}=\mathrm{Ep}=\mathrm{Fp}=\mathrm{p}\)
Ergo p is a common point that is fixed of \(\mathrm{S}, \mathrm{C}, \mathrm{D}, \mathrm{E}, \mathrm{F}\).
Uniqueness: - Let \(s\) be another common point that is fixed of S, C, D, E , F. Suppose \(t \neq\)
Put \(x=p, y=s\) in (1.1)
U2(Rp,Ss,h) [U(EFp,Rp,h).U(CDs,Ss,h)][pU(EFp,Rp,h)+qU(EFp,CDs,h)]U(EFp,Ss,h)
and V2(Rp,Ss,h) \(\rho[\mathrm{V}(\mathrm{EFp}, \mathrm{Rp}, \mathrm{h}) . \mathrm{V}(\mathrm{CDs}, \mathrm{Ss}, \mathrm{h})][\mathrm{pV}(\mathrm{EFp}, \mathrm{Rp}, \mathrm{h})+\mathrm{qV}(\mathrm{EFp}, \mathrm{CDs}, \mathrm{h})] \mathrm{V}(\mathrm{EFp}, \mathrm{Ss}, \mathrm{h})\)
\(\mathrm{U} 2(\mathrm{Rp}, \mathrm{Ss}, \mathrm{h}) \quad[\mathrm{U}(\mathrm{Rp}, \mathrm{Rp}, \mathrm{h}) . \mathrm{U}(\mathrm{Ss}, \mathrm{Ss}, \mathrm{h})] \mathrm{i}[\mathrm{pU}(\mathrm{Rp}, \mathrm{Rp}, \mathrm{h})+\mathrm{qU}(\mathrm{Rp}, \mathrm{Ss}, \mathrm{h})] \mathrm{U}(\mathrm{Rp}, \mathrm{Ss}, \mathrm{h})\)
and V2(Rp,Ss,h) \(\rho[\mathrm{V}(\mathrm{Rp}, \mathrm{Rp}, \mathrm{h}) . \mathrm{V}(\mathrm{Ss}, \mathrm{Ss}, \mathrm{h})] \mathrm{i}[\mathrm{pV}(\mathrm{Rp}, \mathrm{Rp}, \mathrm{h})+\mathrm{qV}(\mathrm{Rp}, \mathrm{Ss}, \mathrm{h})] \mathrm{U}(\mathrm{Rp}, \mathrm{Sp}, \mathrm{h})\)
U2(p,s,h) i [p+qU(p,s,h)]U(p,s,h)
and \(\mathrm{V} 2(\mathrm{p}, \mathrm{s}, \mathrm{h})[\mathrm{p}+\mathrm{qV}(\mathrm{p}, \mathrm{s}, \mathrm{h})] \mathrm{V}(\mathrm{p}, \mathrm{s}, \mathrm{h})\)
\(\mathrm{U}(\mathrm{p}, \mathrm{s}, \mathrm{h})\) i i \(\mathrm{p} 1-\mathrm{q}\) and \(\mathrm{V}(\mathrm{p}, \mathrm{s}, \mathrm{h}) \mathrm{p} 1-\mathrm{q}\)
\(\mathrm{U}(\mathrm{p}, \mathrm{s}, \mathrm{h})=1\) and \(\mathrm{V}(\mathrm{p}, \mathrm{s}, \mathrm{h})=0\) We get \(\mathrm{p}=\mathrm{s}\).
```

## Corollary

Allow $\mathrm{P}, \mathrm{Q}, \mathrm{R}$ and S be self-maps of $\mathrm{FMS}(\mathrm{Y}, \mathrm{U}, \mathrm{V}, \wedge, \rho)$ with constant t -co-norm and t -norm that is constant defined by $\mathrm{t} \wedge \mathrm{t} \geq \mathrm{t}$ and $(1-\mathrm{t}) \rho(1-\mathrm{t}) \leq(1-\mathrm{t}) \forall \mathrm{a}, \mathrm{b} \in[0,1]$.If the pairs $(\mathrm{P}, \mathrm{S})$ and $(\mathrm{Q}, \mathrm{R})$ are often Weak-compatible then

- The set $(P, S),(Q, R)$ has a coincidence point.
- Further, the mapping P, Q,R and S have actually a unique point that is common is fixed $X$ supplied the involved maps meet the inequality

U2(Px,Qy,t) [U(Sx,Px,t)*U(Ry,Qy,t)] [pU(Sx,Px,t)+qU(Sx,Ry,t)]U(Sx,Qy,t)
and $\mathrm{V} 2(\mathrm{Px}, \mathrm{Qy}, \mathrm{t}) \rho[\mathrm{V}(\mathrm{Sx}, \mathrm{Px}, \mathrm{t}) \rho \mathrm{V}(\mathrm{Ry}, \mathrm{Qy}, \mathrm{t})]$
$[p V(S x, P x, t)+q V(S x, R y, t)] V(S x, Q y, t)$
$\mathrm{x}, \mathrm{y} \mathrm{Y}$ and $\mathrm{t}>0$, where $0<\mathrm{p}, \mathrm{q}<1$ and $\mathrm{p}+\mathrm{q}=1$.

## CONCLUSION

The results improve and extent the scope of the study of common point that is fixed from the course of semi-compatible mappings to a wider class of sub-sequentially continuous mapping in IFMS.
